

DSECT/DSEN Monthly Seminar Series

“When treatments harm: From Clinical Care to Health Data – Implications for Drug Safety and Effectiveness Research”

Presented by **Corinne Hohl, MD, FRCP, MHSc**

*Associate Professor, Department of Emergency Medicine, University of British Columbia
Attending Physician, Department of Emergency Medicine, Vancouver General Hospital
New Investigator, Canadian Institutes for Health Research
Scientist, Centre for Clinical Epidemiology & Evaluation*

Thursday, September 24, 2015 at 3:00-4:00pm EDT
Online webinar (GoToWebinar*)

RSVP: <https://attendee.gotowebinar.com/register/4961410249871804162>

*Audio is VOIP - you must have a speaker or headset to hear the webinar

This presentation will discuss the emerging epidemiology of adverse drug events within clinical care settings, and the limitations of current administrative data sources for capturing adverse drug event outcomes and implications for drug safety and effective research. We will review recent federal legislative changes and discuss opportunities for researchers to influence the generation of health data.

Learning Objectives:

1. To understand the epidemiology of adverse drug events and their clinical implications.
2. To gain and understanding of the limitations of current administrative data, implications for drug safety and effectiveness research and current validations studies.
3. To identify opportunities to generate better health data.

The *Drug Safety and Effectiveness Cross-Disciplinary Training (DSECT)* program and the *Drug Safety and Effectiveness Network (DSEN)* are presenting a monthly online seminar series for faculty, staff, trainees, decision-makers, and other stakeholders engaged in the field of drug safety and effectiveness.
